sauravkumar.rav8@gmail.com

[linkedin.com/in/sauravkumar0907](https://www.linkedin.com/in/sauravkumar0907)

Hands-on experience in AWS, Docker, Kubernetes, Jenkins, GitHub Actions, SonarQube, Prometheus, Grafana, and CloudWatch. Skilled in building CI/CD pipelines, Infrastructure as Code (IaC), container orchestration, cloud automation, and production monitoring. Passionate about implementing DevOps best practices to deliver scalable, reliable, and secure cloud-native applications.

AREAS OF EXPERTISE

Technologies AWS, EC2, VPC, ALB, EKS, ECR, RDS, Aurora, S3, IAM, CloudWatch, SNS, Docker, Kubernetes, Helm, GitHub Actions, Jenkins, ArgoCD, SonarQube, Terraform, Ansible, Prometheus, Grafana, Python, Linux (RHEL), Git, GitHub

PROJECTS

AWS 3-Tier Web Application Architecture | *EC2, VPC, ALB, Auto Scaling, Aurora MySQL, IAM* | [GitHub](#)

- Designed and deployed a highly available 3-tier web application on AWS following the Well-Architected Framework for security, scalability, and high availability.
- Built a custom VPC with public and private subnets across multiple Availability Zones; configured Internet Gateway and NAT Gateway for secure connectivity.
- Configured an Application Load Balancer (ALB) to distribute traffic across EC2 instances; deployed Web Tier in public subnets and Application Tier in private subnets.
- Provisioned Amazon Aurora MySQL with Read Replica for high availability; configured Auto Scaling Groups to dynamically scale EC2 instances under load.
- Implemented secure networking using Security Groups, IAM Roles, and Route Tables; verified end-to-end connectivity across all three application tiers.

End-to-End CI/CD Pipeline with SonarQube on AWS EKS | *Git Actions, Docker, ECR, EKS, SonarQube* | [GitHub](#)

- Designed and implemented an end-to-end CI/CD pipeline using GitHub Actions to automate build, code quality analysis, containerization, and deployment on Amazon EKS.
- Integrated SonarQube for static code analysis to detect bugs, code smells, and vulnerabilities; enforced Quality Gates as a mandatory step before Docker image build.
- Automated Docker image build, versioned tagging, and push to Amazon ECR after successful SonarQube quality validation.
- Deployed containerized applications to EKS using Kubernetes Deployment and Service manifests; managed rolling updates for zero-downtime releases.
- Secured sensitive credentials using GitHub Secrets and AWS IAM best practices; validated deployments via `kubect1` rollout status and pod health checks.

Production Monitoring & Alerting on Amazon EKS | *Prometheus, Grafana, Helm, CloudWatch, SNS*

- Designed and implemented a production-grade monitoring and alerting solution for applications deployed on Amazon EKS.
- Deployed Prometheus and Grafana on Kubernetes using Helm; configured Prometheus to scrape metrics from Pods, Nodes, Deployments, Services, and Containers.
- Created interactive Grafana dashboards to visualize CPU, Memory, Network, Pod, and Node performance metrics in real time.
- Integrated Amazon CloudWatch to monitor AWS infrastructure (EKS, EC2, ALB); configured CloudWatch Alarms for high CPU, memory, and application health issues.
- Integrated Amazon SNS for automated email alerts on critical events; validated monitoring by generating load and verifying dashboard and alert triggers.

TRAINING & APPRENTICESHIP

DevOps Engineer Training & Apprenticeship

Grass IT Solutions

Jan 2026 – Jun 2026

Ahmedabad, Gujarat

EDUCATION

VIT Bhopal University

Bachelor of Technology in Computer Science

Bhopal, MP

2021 – 2025
